

# Non-Functional Requirements Document (NFRD)

Project

**Improving Customer Onboarding Controls and  
KYC Efficiency in Digital Banking**

# — SECURITY REQUIREMENTS —

| Requirement ID                                                                                     | Requirement Description                                                  |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
|  <b>NFR-001</b>   | The system shall enforce role-based access control.                      |
|  <b>NFR-002</b>   | All customer data shall be encrypted in transit and at rest.             |
|  <b>NFR-003</b>  | The system shall support multi-factor authentication for internal users. |
|  <b>NFR-004</b> | The system shall comply with applicable data protection regulations.     |

# PERFORMANCE REQUIREMENTS

| Requirement ID                                                                                     | Requirement Description                                                            |
|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
|  <b>NFR-005</b>   | The system shall process customer applications within 5 seconds under normal load. |
|  <b>NFR-006</b>   | Dashboard pages shall load within 3 seconds.                                       |
|  <b>NFR-007</b> | The system shall support concurrent user access without performance degradation.   |

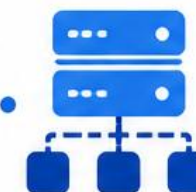

# — AVAILABILITY REQUIREMENTS

| Requirement ID                                                                                    | Requirement Description                                     |
|---------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
|  <b>NFR-008</b>  | The system shall maintain 99.9% uptime.                     |
|  <b>NFR-009</b> | The system shall be available 24/7 for customer onboarding. |

# — SCALABILITY REQUIREMENTS —

| Requirement ID                                                                                    | Requirement Description                                                              |
|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
|  <b>NFR-010</b>  | The system shall support increasing onboarding volumes without major redesign.       |
|  <b>NFR-011</b> | The solution shall support future integration with additional verification services. |

# — RELIABILITY REQUIREMENTS —

| Requirement ID                                                                                    | Requirement Description                                                        |
|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
|  <b>NFR-012</b>  | The system shall recover automatically from temporary failures where possible. |
|  <b>NFR-013</b> | All transactions shall be processed accurately and consistently.               |

# AUDIT & LOGGING REQUIREMENTS

| Requirement ID                                                                                     | Requirement Description                                                    |
|----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
|  <b>NFR-014</b>   | The system shall maintain audit logs for all onboarding activities.        |
|  <b>NFR-015</b>  | Audit logs shall record user actions, timestamps, and transaction details. |
|  <b>NFR-016</b> | Audit logs shall be retained according to organizational policies.         |

# — COMPLIANCE REQUIREMENTS —

| Requirement ID                                                                                    | Requirement Description                                              |
|---------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
|  <b>NFR-017</b>  | The system shall support KYC and AML compliance requirements.        |
|  <b>NFR-018</b> | The system shall maintain records required for regulatory reporting. |

# — DATA RETENTION REQUIREMENTS —

| Requirement ID                                                                                    | Requirement Description                                                               |
|---------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
|  <b>NFR-019</b>  | Customer onboarding records shall be retained according to regulatory requirements.   |
|  <b>NFR-020</b> | Archived records shall be retrievable when required for audit or compliance purposes. |
